

AMAZON ADVENTURE

A TRUE STORY OF SCIENTIFIC DISCOVERY

You might think this is a viper snake... but it's actually a moth caterpillar!

"The most extraordinary instance of imitation I ever met..."

- Henry Walter Bates

This hunting spider mimics a flower bud.

This is a toxic Ithomia butterfly... and this is its non-toxic mimic (Leptalis).

This potoo bird blends in with a tree trunk.

This katydid insect looks like a leaf.

This stick mantis blends with the tree trunk to avoid detection.

AMAZON ADVENTURE

A TRUE STORY OF SCIENTIFIC DISCOVERY

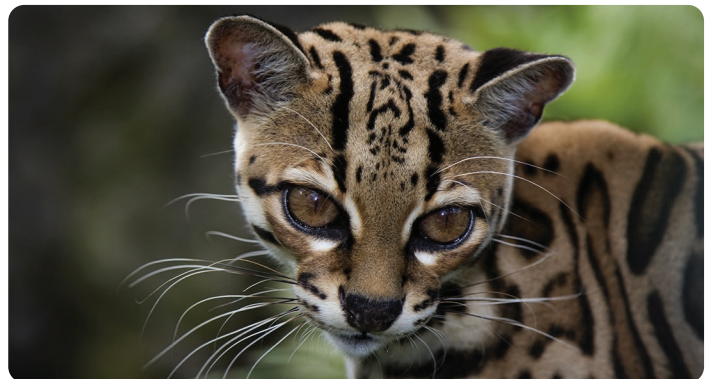

With its long body and tail, the slender anole lizard can barely be seen against these tree vines.

"Fish or Leaf?" The amazon leaf fish.

Until it takes flight, this leaf moth is perfectly hidden from predators.

This margay cat mimics the call of a monkey to attract prey.
