**“If you take care of the birds, you take care of most of the big problems in the world.”**

**- Thomas Lovejoy**

As the glaciers that once covered North America retreated, they left an astounding gift of connected rivers, lakes and wetlands. Today, these largely unknown, water highways remain vital for sustaining all wildlife that live there and especially for the magnificent birds that migrate along these “flyways”.

**WINGS 3D** tells the story of the epic migrations of three amazing bird families – the Sandhill Crane, the Canvasback Duck and the Eastern Bluebird. Working with top scientists, the award-winning filmmaking team will bring us never before seen close-ups of fascinating behaviors creating a kaleidoscope of colors and uplifting bird songs.

Audiences follow the triumphs and challenges of these remarkable creatures as they defy all odds and soar across mountains, deserts and oceans – always searching for safe havens to rest, refuel and raise their young. No matter where we live, our feathered friends and their wetland habitats are powerful examples of how we’re all interconnected, from the Arctic to the tropics and across the heartland of America.

**Available in 2D and 3D, 15/70, IMAX Digital, IMAX Laser, DCI-compliant Digital, DCI-compliant Laser, Dome-customized 15/70 and Fulldome Digital**

PLANNED RELEASE DATE - SPRING 2021
